Distance learning...access is the focus

As early as 1728, the concept of distance learning was explored to open access to learningdelivered by mail

Mail was the dominate mode of delivery which opened access to new groups of students previously denied the ability to attend classes.

In his 1981 book Learning at the Back Door, Charles Wedemeyer described distance learning as providing access to those who can't be present in the classroom.

Army Distance learning...the focus is access

PRINT

Delivered through mail, facsimile, or downloaded from the Internet
